

SPECIALIZING IN HYDRO EXCAVATION & CIVIL CONSTRUCTION

MERUT CONSTRUCTION CORPORATION

Merut Construction is a **100% woman-owned, WBENC-certified civil contractor**, providing hydrovac and air-knife excavation, foundation work, rebar installation, drilling of piers, E&S controls, site restoration, mechanical excavation services, and security fence installation to the utility market.

We bring together years of construction management, union skill, and field experience to provide top-quality workmanship to our customers. At Merut, every project is handled with the same importance and detail, no matter the size.

Our professional team strives to exceed customer satisfaction and expectations to create continued partnerships that benefit our future and our client's future.

We are proud to share our project experience! To request a full company resume, email bids@merutconstruction.com.

GEOGRAPHIC TERRITORY

Pennsylvania
New Jersey
Maryland

MISSION

To deliver reliable, professional soft-dig excavation, and other civil services for utility customers, while offering quality careers, and placing safety and minimizing our environmental footprint as our top priorities.

SIGNATORY UNION CONTRACTOR:

- IBEW Local 1319
- IBEW Local 126
- IUOE Local 542

VISION

To be a leading specialized contractor for the utility market in Pennsylvania. To promote inspiration within our team, make a positive difference in the lives of our employees, and have a lasting positive impact on the customers we serve.

- 82-1032784

U.S. DOT #:

- 3075490

NAICS Codes:

- 238910 / 238990

WBE National Certificate #:

- 1901997

Woman-Owned Small Business Certificate #:

- WOSB191460

QUALITY

At Merut, we bring years of construction management experience together along with being a signatory union contractor. We provide only top-quality workmanship for our customers where every project is handled with the same importance and detail, no matter the size. Our professionals strive to exceed expectations and customer satisfaction so that we create continued partnerships for our future.

VACUUM EXCAVATION. CIVIL CONSTRUCTION.

HYDROVAC & AIR-KNIFE EXCAVATION SERVICES

We specialize in an alternate, highly-efficient, non-destructive excavation process utilizing the innovation of our unique fleet of equipment - hydrovac trucks. The trucks allow us to serve our clients with two types of "digging".

- Hydro excavation—also referred to as hydrovac, hydro trenching, or soft digging—leverages highly pressurized, heated streams of water to break up the soil. The soil is then suctioned out through heavy-duty vacuums and stored in nearby debris tanks or trucks for later transport.
- Air excavation—otherwise known as airvac, pneumatic, or air-knife excavation—uses compressed air to break up the ground soil before siphoning it through a vacuum hose. This process has the unique ability to backfill dry soil.

Hydro and air excavation are preferred for safely and reliably:

- "Daylighting", or exposing underground utility lines, cables, and sensitive underground infrastructure.
- "Slot trenching", or digging narrow trenches for installation of cables, lines, or other systems.

FOUNDATIONS, DRILLING, & OTHER CIVIL SERVICES

Merut Construction provides civil services—forming and installing structural concrete foundations, subgrade walls, footings, and other building applications.

We focus on structural excavation and backfill, concrete formwork design and installation to spec, concrete reinforcement installation, and concrete placement and finishing.

Merut also performs:

- Security fence installations
- Foundations for equipment or drilled piers
- Soil stabilization, rebar installation, and concrete finishing
- E & S controls
- Excavation and finish grading
- Drilling of piers

SAFE EXCAVATION for pipelines, cables, electrical utility lines and grids, water and sewer piping, and other underground structures.

Why choose vacuum excavation?

- Eliminates damage from harsh hand or mechanical excavation
- Prevents environmental and equipment damage
- Reduces buried utility strikes
- Adaptable to soil needs
- Cleaner working environment
- Minimal environmental impact
- Faster, more precise digging
- Requires less manual labor and overall risk
- Decreases project expenses
- Fewer delays due to weather; vacuum excavation can be performed at most temperatures

Merut Construction's stance on safety is all-encompassing.

The safety, health, and well-being of the environment and our employees are ingrained into the very fibers of our company. Safety is part of our daily routine to mitigate risks associated with excavation and civil construction. To ensure our employees get home safely each and every day, Merut Construction employees have successfully:

- Completed a DOT physical, including a drug and alcohol screening, during our pre-employment process.
- Trained in company QHSE policies and procedures, including personal protective equipment (PPE), small and heavy equipment, spotter, electrical awareness, excavation and trenching, and many more.
- Attend initial and ongoing worksite safety training and obtain certifications for specific skills performed.
- Achieved OSHA 10 / 30 certifications.

PREQUALIFYING MERUT

Merut Construction Corporation is an active member of ISNetworld, centralized access of compliance data and reporting, which makes it easier for our clients to prequalify our company.

The following information about Merut Construction is available at www.isnetworld.com:

- Experience Modification Rate (EMR) Letters
- Health, Safety, and Environmental Programs
- OSHA Forms
- Health, Safety, and Environmental Questionnaire
- Insurance Certificates
- Training Information
- Reporting of hours, near-misses, and incidents

ISN's Review and Verification Services (RAVS) verifies and evaluates our health, safety, and procurement information to ensure regulatory and client-specific requirements are met.
